WIMI Seminars

# WI-MI

Seminar titled "The Role of Education in Climate Change Awareness: Building Resilient, Informed Future Leaders" was held on March, 4th and March, 6th at Primary school Glina in Glina and Primary school Mate Lovraka in Petrinja, Croatia. There were 52 participants all together. After the seminar completion majority of them stated that they know more about climate change, sustainable development and how Croatian National Curriculum defines these topics. Also they feel that the climate change topic should be more taught in everyday classes and that they get a lot of useful information about methods and materials to work on the topic in their subjects. Participants got to know Service Learning as a useful method for their students as well as Community Science Projects. Involving parents in everyday activities will occur more often as well as the use of different digital tools. In the final part of the seminar there was a unanimous decision that the climate change topic is of great importance and that we all should work on it much more.
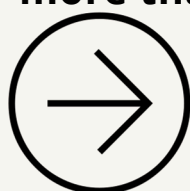

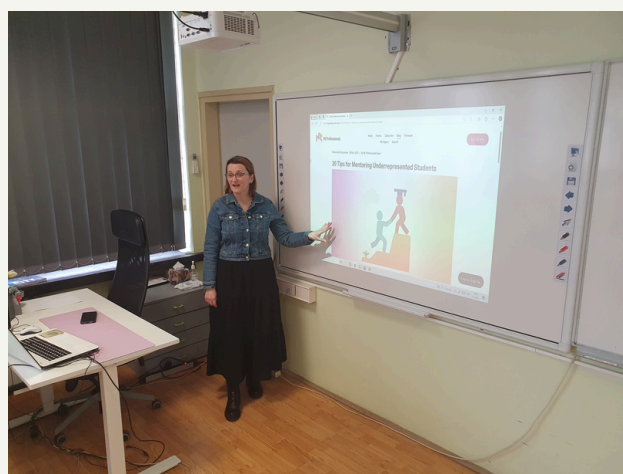

WIMI Webinars

WI-MI

Webinar titled "How to Include Disadvantaged Students in Taking Action on Climate Change" was held on March, 11th and March, 13th at Primary school Glina in Glina, Croatia and Secondary school Glina in Glina, Croatia. There were 43 participants all together. After the webinar completion majority of them stated that they know more about climate change, sustainable development and how Croatian National Curriculum defines these topics. Also they feel that the climate change topic should be more taught in everyday classes and that they would like for their school to become more Eco friendly schools. Participants got to know Metacognition as a useful method for their students as well as Community Science Projects. Involving parents in everyday activities will occur more often as well as the use of different mentoring programs for students. In the final part of the seminar there was a unanimous decision that the climate change topic is of great importance and that we all should work on it much more than we do now.
